

Recognizing the value of a true original

GE is pleased to extend an offer to our GEnx* customers to enroll their engines in the GEnx TRUEngine* Program.

TRUEngine qualification is an open and outward expression that an engine owner or operator recognizes engine maintenance to be more than fixing a part or swapping-out material – it's embracing the technology that was designed as a system for maximum performance and predictable maintenance.

Already in place with CFM56* , CF6* and CF34* engine families, the TRUEngine designation has grown into a common and recognized status for engines that include the technology and legacy of GE and CFM engines.

TRUEngine designated engines are fully supported as a complete engine system, and present the least unknowns when evaluated by perspective buyers, financiers, and insurers.

Advanced

- First commercial composite fan blade and case
- Best-in-class NOx emissions

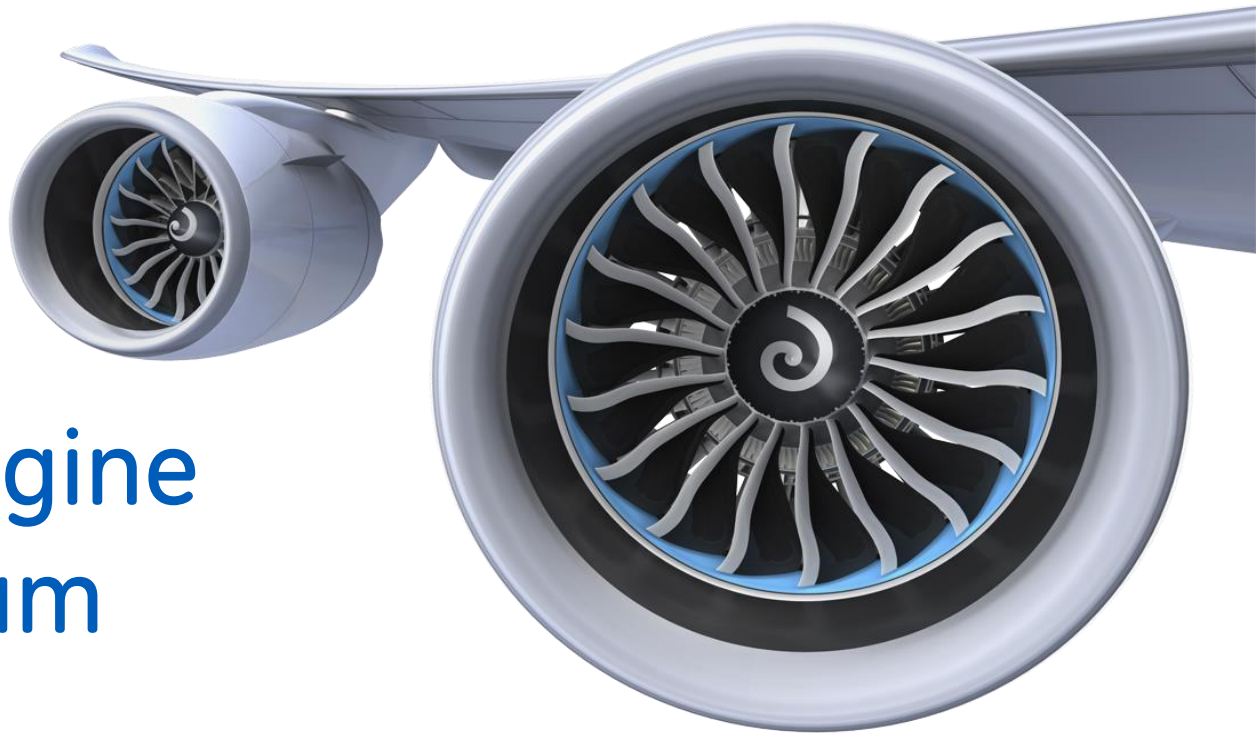

Supportable

- 24/7 support
- Global MRO network
- Backed by GE

Marketable

- 1,300 engines on order
- Selected to power the Boeing 787 Dreamliner* and Boeing 747-8* aircraft

GEnx TRUEngine Program

TRUEngine benefits

The TRUEngine program contains certain inherent advantages, including:

- Higher asset value and improved marketability of engines
- Easily identifies engines that contain only GE parts and repairs
- Ensures optimized support processes and applicability of GE-issued technical data

Beyond these inherent advantages are quantitative benefits that improve conditions in a typical engine contract, such as:

- Content Assurance Guarantee
- AOG First Response Guarantee
- Line Maintenance Special Guarantee
- Life-limited Parts (LLP) Scrap for Cause Guarantee for GENx LLP Services Agreement Customers

In addition, TRUEngine-designated engines always include optimized product support and the peace of mind that comes with the assurance of the full range of GE's world-class support.

Quick Facts

- No cost to participate
- Granted on a per engine serial number (ESN) basis
- Participation is optional
- Owners or operators may apply
- 2-step qualification process – customer declaration and submittal of maintenance records since birth or last qualification
